

IN BRIEF

With the local contact service you can book domain names on extensions submitted to restrictions.

Getting these extensions will help you extending your network, to get a higher visibility on the web.

LOCAL CONTACT SERVICE

REGISTRATION OPTIONS

The registries and extensions in different countries have different registration rules. Some registries require the owner to reside or be registered into the local country with proof of registration whilst others require a contact having a valid postal address in the country.

NETIM can provide you with the services required to safeguard your domain names in these countries.

LOCAL CONTACT SERVICE

Some countries require a local administrative contact to authorize domain name registration in their extension.

Thanks to specific agreements made with its network of partners, or by himself, NETIM can provide you with a local address in the following countries:

-  .FR domain name .FR - France
-  .DE domain name .DE - Germany
-  .HU domain name .HU - Hungary
-  .EE domain name .EE - Estonia

To use this service, when ordering a new registration or a transfer, if your postal address does not satisfy the local contact requirement for the extension, you will be asked to nominate NETIM as your local administrative contact.

The local contact service only applies at the administrative contact level. If the owner does not satisfy the extension's registration rules, the trustee service has to be used.
